**Table 1. Crystal Recommendations**

Frequency (Fund)	Cut	Loading	Load Cap	Drive (max.)	Shunt Cap (max.)	Motional (max.)	Tolerance (max.)	Stability (max.)	Aging (max.)
14.31818 MHz	AT	Parallel	20 pF	0.1 mW	5 pF	0.016 pF	35 ppm	30 ppm	5 ppm

The SL28SRC01 requires a Parallel Resonance Crystal. Substituting a series resonance crystal causes the SL28SRC01 to operate at the wrong frequency and violates the ppm specification. For most applications there is a 300-ppm frequency shift between series and parallel crystals due to incorrect loading.

**Crystal Loading**

Crystal loading plays a critical role in achieving low ppm performance. To realize low ppm performance, use the total capacitance the crystal sees to calculate the appropriate capacitive loading (CL).

Figure 1 shows a typical crystal configuration using the two trim capacitors. It is important that the trim capacitors are in series with the crystal. It is not true that load capacitors are in parallel with the crystal and are approximately equal to the load capacitance of the crystal.

**Figure 1. Crystal Capacitive Clarification**

**Calculating Load Capacitors**

In addition to the standard external trim capacitors, consider the trace capacitance and pin capacitance to calculate the crystal loading correctly. Again, the capacitance on each side is in series with the crystal. The total capacitance on both side is twice the specified crystal load capacitance (CL). Trim

capacitors are calculated to provide equal capacitive loading on both sides.

Use the following formulas to calculate the trim capacitor values for Ce1 and Ce2 .

**Figure 2. Crystal Loading Example**

**Load Capacitance (each side)**

$$C_e = 2 * CL - (C_s + C_i)$$

**Total Capacitance (as seen by the crystal)**

$$CL_e = \frac{1}{\left( \frac{1}{C_{e1} + C_{s1} + C_{i1}} + \frac{1}{C_{e2} + C_{s2} + C_{i2}} \right)}$$

- CL.....Crystal load capacitance
- CLe..... Actual loading seen by crystal using standard value trim capacitors
- Ce..... External trim capacitors
- Cs..... Stray capacitance (terraced)
- Ci ..... Internal capacitance (lead frame, bond wires, etc.)
