## Dual Comparator

TC75W56 is a CMOS type general-purpose dual comparator capable of single power supply operation and using lower supply currents than the conventional bipolar comparators. Its push-pull output can connect directly to local IC's such as TTL and CMOS circuits.

### Features

- Low supply current:  $I_{DD} = 20\mu A$  (typ.)
- Single power supply operation
- Wide common mode input voltage range:  $V_{SS}$  to  $V_{DD}-0.9V$
- Push-pull output circuit
- Low input bias current
- Small package

## Absolute Maximum Ratings (Ta = 25°C)

Characteristic	Symbol	Rating	N
Supply voltage	$V_{DD}, V_{SS}$	$\pm 3.5$ or 7	V
Differential input voltage	$DV_{IN}$	$\pm 7$	V
Input voltage	$V_{IN}$	$V_{SS}$ to $V_{DD}$	V
Output current	$I_{OUT}$	$\pm 3.5$	mA
Power dissipation	$P_D$	250 (TC75W56FU)	mW
		200 (TC75W56FK)	
Operating temperature	$T_{opr}$	-40 to 85	°C
Storage temperature	$T_{stg}$	-55 to 125	°C

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.

Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook ("Handling Precautions"/"Derating Concept and Methods") and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Note: Since this product sometimes brings about latchcap, which is peculiar to CMOS devices, note the following points:

- Don't raise the voltage level of I/O pins beyond  $V_{DD}$ , nor lower it below  $V_{SS}$ . Consider the timing for power supply, too.
- Don't let any abnormal noise enter the device.
